Addendum for Overweight Permits

This Addendum is issued to Overweight Permit Holders to cover the new Otaki to Peka Peka expressway, once it is open.

Through this Addendum, Waka Kotahi (NZ Transport Agency) as Road Controlling Authority, permits operators with a continuous overweight permit for the Wellington region issued during 2021, that is for a transporter with a gross mass of less than 100T, or a mobile crane with a gross mass of less than 40T to use the expressway without bridge restrictions.

Operators with a 2021 permit for transporter with a gross mass of 100T or more, or a mobile crane with a gross mass of 40T or more must apply for a new permit to be able to travel on the expressway.

Operators with a continuous overweight permit issued during 2022 will have the PP2O expressway already included and will need to check their permit for restrictions.

The new alignment (PP2O) will be part of SH1N, and the old alignment will be known as SH1P. See Page 2 for a list of structures associated with each section of State Highway
