

We're making the road safer for motorcyclists

Motorcyclists are at greater risk of being injured on the road.

With flexible median barriers in place, you can avoid:

- being injured by a vehicle crossing the centreline
- ending up in the path of oncoming traffic if you accidentally come off your motorcycle
- hitting dangerous hazards like poles, trees and ditches.

* Carlsson (2009) Evaluation of 2+1 roads with cable barriers: Final report VTI rapport 636A.

nzta.govt.nz/safety-infrastructure

Studies show flexible median barriers can reduce the number of motorcyclists killed by up to

50%*
