Please refer to Rule 59 of the Regional Freshwater Plan or contact the Council for details of these additional standards.

Water is required for dust suppression. The rate requested will ensure any potential adverse dust effects can be appropriately managed.

6 Hydrology

This application must include information about the stream flow at the site during dry periods and the availability of water for allocation. This information will need to be obtained by undertaking flow gaugings during the summer if this has not been done previously. Please contact the Council's Hydrology Department to get advice about the existing flow record, and if necessary to make arrangements for the gaugings to be undertaken.

6.1 What is the mean annual low flow (MALF) at the take site? *(Obtain this from Council Hydrology Department)*

- The natural character of the river, lake or stream and visual aesthetics
- Cultural, spiritual, historic, recreational, scientific and amenity values
- Ecology (*e.g. river and lake habitat, vegetation, fish and fisheries, wildlife*)
- River flow

See Section 9.8.7 of AEE report for assessment of effects.

7.3 How will the adverse effects described in question 7.2 above be mitigated?

See Section 5.8.1 of AEE report. Intake will be appropriately screened and abstraction rate managed to ensure no more than 10% of MALF is abstracted (by limiting take to no more than 20% change in water depth).

7.4 Please note any other information that may assist the Council in processing your application.

Please refer AEE report and Technical Report 7b in Volume 3.

8 Assessment of Part 2 Matters and Policy

An assessment of the activity against the matters set out in Part 2 of the RMA and against any relevant provisions of policy documents and regulations must be provided with the application. The assessment must be in sufficient detail to satisfy the purpose for which its required.

For most applications the brief assessment provided below will be adequate. However for activities with significant policy implications, or where a National Policy Statement is relevant, a specific more comprehensive assessment is likely to be required.

The proposal is consistent with Part 2 of the RMA (the focus of which is to promote sustainable management of natural resources). The *Regional Freshwater Plan for Taranaki* generally supports taking surface water if at least 2/3 of habitat at MALF is retained and particular regard is had for specific matters such as ecological and amenity values, existing and future needs and the relationship of Tangata Whenua with the water body.
