

# Tinwald Corridor improvements

## Work ramping up again

Work has resumed on the project with our crews focusing on upgrades to the Viaduct and Graham Street.

Below we outline what work is coming up this year and what's left to complete on the project.

## Reminder of work underway

For the next few weeks, we'll be working on Melcombe Street at the Viaduct with a road closure in place. We'll be installing a pedestrian crossing, new footpath and completing pavement improvements.

Please look out for changes in traffic management and follow the signs on-site.

Pavement improvements are also being undertaken on Graham Street, at the intersection with McMurdo St. The work is expected to be complete in early March and a road closure will be in place until then.

## A message from our partners at KiwiRail

Thank you for your ongoing patience as we continue with the upgrade of the Lagmhor Road level crossing and roading system. We're working hard to complete this project, and your understanding is appreciated.

We're almost finished, with the physical works component of the project nearly complete. You'll be aware that the new road layout, including flashing lights and barrier arms, is in place and the new traffic light poles have been installed.

The final piece of work is to install the LOC box which is in essence, the 'brain' of the level crossing. While a temporary solution is currently in place, which is allowing the level crossing to operate safely, this essential component is responsible for coordinating the barrier arms with the pedestrian gates and traffic lights.

We're expecting work on the programming, installation and testing of the LOC box to be completed by early April. Work on this part of the project has been extended by the delayed arrival of components from overseas.

While the LOC is being built and tested, you mightn't see much physical activity at the site because most of the technical work is completed off-site.

Traffic management at the SH1/Lagmhor Road/Agnes Street intersection will be ongoing, as the system won't be fully operational until this work is completed.

Thank you,  
The KiwiRail team.
