

Brigham Creek to Waimauku

Safety improvements

Your thoughts on how we can improve safety and efficiency on SH16

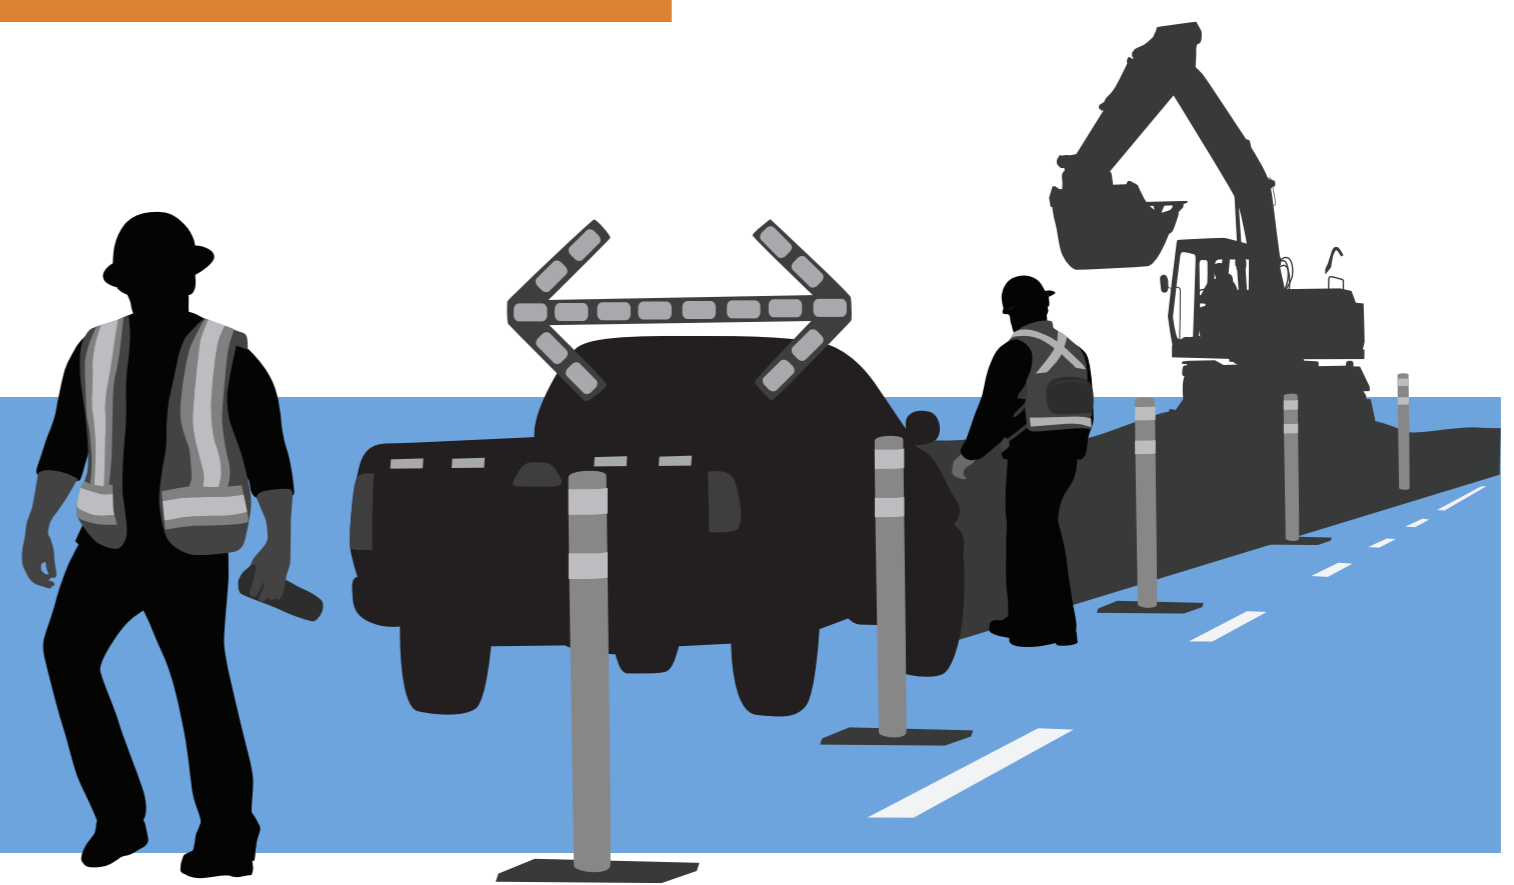

We've got a really good picture of the changes you want to see on SH16 through feedback you've provided online and at open days for TFUG (Transport for Future Urban Growth) and other projects in the north west. Here's a summary of what you have told us so far:

Make the road safer. Too many crashes are resulting in deaths and serious injuries.

Make the road more reliable by reducing queuing at intersections and improving traffic flow.

Improve intersections to make them more efficient and safer. The Coatesville-Riverhead Highway intersection is of particular concern.

Make the highway more accommodating for cyclists and pedestrians.
