

# Safety between Huapai and Waimauku - local intersections

## Considerations

- High head on crash risk
- High crash history
- High number of local property accesses
- Lack of visibility at the intersections
- Increased risk due to the rail crossing at Matua Road
- Lower volume of traffic east of Kumeu

## Matua Road

- The wider shoulders provide space to decelerate and/or accelerate
- Right-turn bay allows for safer turning movements
- We are talking to KiwiRail about improving visibility and safety when driving in this area

Existing bridge location

## Fosters Road

- The wider shoulders provide space to decelerate and/or accelerate
- Widening the bridge provides for better sight lines and increased separation between traffic
- Right-turn bay allows for safer turning movements

## What do you think?

We'd like to hear what you think about the proposals. Your views are important and will help us implement the most effective improvements for this section of corridor. After all, as regular users of the road you know its challenges and understand how any safety improvements could benefit our communities.
