

Sustainability Statement of Intent

We will achieve restorative environmental, social, cultural and economic outcomes through our commitment to sustainable design, construction, and future use

We will:

- Genuinely partner with tangata whenua to reflect cultural and project values to leave lasting outcomes
- Contribute to the enhanced wellbeing of local people and communities in the wider Manawatū and Tararua regions
- Embed enduring outcomes and positive social, cultural, heritage and public health legacies
- Measure and contribute to Aotearoa New Zealand's carbon emission targets through reducing energy consumptions and material use
- Achieve a net-gain on the environmental impact of the project, to ensure awa (river), hau takiwā (air), and whenua (land) health is protected, maintained, and enhanced
- Focus on resource efficiency across waste, water, carbon emissions and material use
- Ensure sustainability aspects are considered through the procurement process for a step-change in sector environmental and social responsibility practice
