## 1. PREFACE

Traffic monitoring provides a fundamental tool for the management of the State Highway network. The measure of the traffic demand, imposed on the network, enables Transit New Zealand (Transit) to effectively and efficiently allocate resources.

The information contained in this publication is derived from Transit's traffic data collection system.

The system consists of a hierarchy of equipment that ranges from sophisticated weigh-in-motion and vehicle classification collection via telemetry to simple portable tube traffic counters.

The data collection, and processing, for the permanent weigh-in-motion (WiM) and telemetry sites is managed by Transit's National Office in Wellington. The remaining sites, which represent the large majority of the sites throughout New Zealand, are not monitored continuously, and are counted several times a year as part of the Transit's regional traffic counting programmes managed by the Transit regional offices.

Transit welcomes any feedback on this publication. This document is available on the Transit website at [www.transit.govt.nz](http://www.transit.govt.nz)

## 2. DISCLAIMER

The traffic data contained in this document is intended to be used as an approximate indication of traffic flows on state highways throughout New Zealand. The traffic volumes are typically calculated from individual counts over one week intervals. Most sites are counted one, two or three times a year, with other sites counted on a continuous basis.

The limitations of the traffic counters and their installation, conversion of axle pairs to vehicle counts (in the case of tube counts), seasonal variations, congestion effects, and various analysis procedures contribute to a level of approximation in the data. These factors should be taken into account when using the AADT data.

For detailed design and project evaluation purposes, the actual traffic counts upon which this document is based can be obtained from the appropriate Transit Region office.

Transit and its employees or agents involved in preparation and publication of this document cannot accept liability for its contents or for any consequences arising from its use. People using the contents of this document should apply, and rely upon, their own skill and judgement. The contents should not be used in isolation from other sources of advice and information.

### 3. EQUIPMENT USED

<b>National Telemetry Site Contract</b> <b>Continuous Data</b> <b>Data collection managed nationally by Transit New Zealand National Office</b>		
<p>These sites are located at carefully selected locations around New Zealand. They are installed with permanent power and communications, so the continuous data can be collected regularly without visiting the site.                  These sites are highlighted in the enclosed data table using a <b>bold</b> font.</p>		
Bending Plates Scales (WiM) (4 Sites)	Dual Inductive Loops (90 Sites)	Piezo Electric Axle Classifiers (1 Site)
Axle Loadings	Classification by Length	Classification by Axle

<b>Regional Counting Contracts</b> <b>Non-Continuous Data (Majority)</b> <b>Data collection managed regionally by Transit New Zealand Regional Offices</b>			
<p>The majority of these sites operate independently and the data is collected manually. The majority of these sites has data collected for between 2 and 4 weeks per year. There are some continuous sites within the regional contracts. These can be identified throughout this document using the Accepted Days column.</p>			
Dual Inductive Loops (353 Site)	Single Inductive Loops (715 Sites)	Pneumatic Tube (315 Sites)	Virtual (281 Sites)
Classification by Length	Count Only	Classification by Axle	Calculated from Adjacent Sites

### 4. RELATED DOCUMENTATION

The following documents are available from the Transit New Zealand webpage.

[www.transit.govt.nz](http://www.transit.govt.nz)

Traffic Monitoring of State Highways Manual – SM052  
 Historic Copies of Traffic Data Booklets 1975 – present  
 State Highway Maps

## 6. NATIONAL GROWTH INFORMATION

The graph below provides an estimate on the indexed growth observed on the State Highway.

The index is based on data collected from continuously counted national telemetry sites only. The base for this index is 1.00 in 1989.

## **7. AADT DATA TABLES WITH COLUMN DESCRIPTIONS**

### ***Region***

This is the Transit New Zealand Region, responsible for the specific section of State Highway where the traffic counting site is located.

### ***SH State Highway***

State Highway 1 is suffixed N and S for the North and South Islands respectively.

### ***RS Reference Station***

This is a location, where its position is accurately known point on a State Highway, from which Route Position's can be measured. These are usually fixed points, such as: SH starts / ends, bridges and intersection etc.

### ***RP Route Position***

This indicates the distance from the last RS to the specific location in kilometers.

### ***Site Ref***

This is the unique identifier used within Transit New Zealand's Traffic Monitoring System (TMS). For further information on how these references are created, please refer to the Traffic Monitoring of State Highways Manual – SM052.

### ***Description***

This is an approximate descriptive location on the state highway of the traffic counting site.

### ***Lane***

This indicates if the AADT and % Heavy data, is reported separately in the increasing and decreasing directions or in both directions together.

### ***Equipment (Current)***

This details the primary equipment type being used to collect traffic data at the specific location. There may be a combination of equipment types used in some circumstances.

### ***AADT Annual Average Daily Traffic volume,***

This is an estimation of the daily traffic averaged over the (calendar) specified year. The majority of the traffic counts provided in this publication have been undertaken at the particular count site over two or more typical weeks in the year and seasonally adjusted, using continuous data obtained from Telemetry Sites, to provide a relatively robust estimate of the annual traffic volume at that location. Other traffic details such as the vehicle composition are available for some sites from the regional contact, see below.

### ***% Heavy***

This is an estimate of the proportion of the AADT, which is deemed a heavy vehicle: ie greater than 3.5 tonnes for the current year.

### ***Accepted Days***

This provides an indication of the sample size collected at the specific location during the year. This, along with other details provided above, will assist the user in sorting the data by confidence in the accuracy.

## 8. WiM DATA TABLES WITH COLUMN DESCRIPTIONS

The following tables have been provided from Transit New Zealand's four Weigh-in-Motion (WiM) Sites.

WiM Sites operate using a bending plate scale that records the loading of each heavy vehicle crossing the site. Heavy vehicles are deemed to be those with a gross weight over 3.5 tonnes.

---

### WiM Table 1 Column Descriptions

#### ***PAT Type***

This is the code relating to the axle configuration.

#### ***Description***

This illustrates the number of axles and an indication of the spacing between axles.

#### ***Total***

This indicates the number of heavy vehicles of each type to cross each site during the specific year.

#### ***% Percentage***

This indicates the % of the total heavy vehicles in each type crossing each site during the specific year.

---

### WiM Table 2 Column Descriptions

#### ***Load (kN)***

This is the load imposed by each axle type.

#### ***Axle Groups***

SAST – Single Axle Single Tyre  
SADT - Single Axle Dual Tyre  
TADT – Tandem Axle Dual Tyre  
TSST – Twin Steer Single Tyre  
TRDT – Triple Axle Dual Tyre  
QADT - Quad Axle Dual Tyre

It is important to note that the weigh-in-motion (WiM) data from which the following table is derived, cannot distinguish between single and dual tyres. It is assumed that steer axles are single tyred and all others are dual tyred. From observation, there is an increase in the utilisation of 'super single' type tyres in the SADT, TADT, TAST and TRDT groups, however, the impact or significance can not be measured or derived from this technology. Despite the QADT description, 80-90% of Quad Axles are single tyred.
